TOPIC: Banking plan

PROBLEM:

We need to create a program that helps to improve the mismanagement of a person's money from the control of their expenses so as to avoid losing money or even going bankrupt.

To understand how the program works in its entirety, it is first important to understand the use of accounts: savings, currents, CDT accounts and the income generated in the month and in the year so that the program can help manage the person's money effectively.

OVERVIEW:

The program will contribute to society since it is a system that will help us to administer money correctly. The program is a banking simulation where you will know the amount of money you have in your account, thus separating it into: profile, savings, current, CDT, and their respective interest generated monthly and annually. You can enter or withdraw "money" to manage your finances. The users will be people who need help to handle their cash. It is a program that hopes to help young people and entrepreneurs who do not know how to manage a bank account.

BACKGROUND:

Over the years, one of the largest sources of investment known to people has been and will be banks or cooperatives. Great places full of money. However, in such sites due to its large expansions, it requires a control and order on the part of the users of the site, to guide people to find a better way to invest their money and generate profits.

Currently, technology is advanced and it is for this very reason that it forces us to improve the security of our applications when carrying out an economic procedure. This is how large sophisticated programs help these sites to have correct money management.

We know that many people have doubts about investing in a savings bank account or similar, so we decided to create a simulator that shows how much their profit would be, and that also helps to keep a basic account statement about what they are depositing and investing. Many banks use these simulators but generally you must be linked to the bank, for this reason a program will be made in which you do not necessarily have to be linked to the bank.
